

SKILL LAB

21ST century is a century of Skills. While colleges and institutions of higher learning aim at training the students with the domain specific technical skills, also known as hard skills, required to secure a job after graduation, same cannot be said about the soft skills, which include people skills, managerial skills and the skill of handling self. It is a well known fact that while the hard skills can help an individual get a job, it is the soft skills which enable an individual to perform better in a job and grow in the profession. Many of these skills were picked up by people in their formative years through informal, imitational learning at home. With the massive advent of nuclear families in the industrialised and urbanized era, the responsibility of training students on how to handle self, others and circumstances is completely shifted from families to schools. The schools are now expected to not only deliver on the scholastic front but also focus on installing values, developing manners, attitudes, behaviours and skills. It is in this context that ChiselCraft® has designed a flagship programme called **SKILL LAB** which focuses on training school students on the essential 21st Century Skills so that every student not only knows how to perform in a job but also masters how to handle self, others and situations.

List of Skills covered in SKILL LAB:

1. Communication skill
